1. Project Overview

This document defines the complete architecture and scope for the **Renvura** e-commerce platform — a child-development and play-based learning brand for the Bangladeshi market. It is an **expertise-first** store: educational content and expert curation build trust, and the shop monetises that trust through carefully selected, safety-checked products.

1.1 Business Positioning

- **Niche:** Child development & learning materials for ages 2–12. ECD / early years is the primary, hero focus; the catalog extends through age 12.
- **Differentiator:** Founder is a child-development professional (15 years in ECCD, inclusive education; M.Ed., IER, University of Dhaka). No competitor can match this expertise.
- **Model:** Content-led authority brand with a shop attached. Teaching flows into the exact materials that apply.
- **Market:** Bangladesh — mobile-first, Bengali-first, trust-driven, largely cash-on-delivery.

1.2 Core Objectives

- Launch efficiently with a production-ready, scalable platform.
- Solve the trust problem that limits Bangladeshi e-commerce, via expert positioning and social proof.
- Support the full sales funnel: acquisition, conversion, and — critically — repeat purchase as children age.
- Serve customers in both Bangla and English, on low-to-mid-range Android devices.
- **Win organic Google search** as a primary acquisition channel via strong technical SEO and expert content.
- **Operate a multi-author expert blog** where ECD and education specialists publish articles, video, and short-form content.

2. Finalized Technology Stack

All decisions below are locked and agreed. Rationale is included so the build team (and Claude CLI) understands the intent behind each choice.

Layer	Technology	Why
Framework	Next.js (App Router)	SSR/SSG for SEO — essential for a content-led brand. Built-in image optimization for mobile.
Language	TypeScript	Type safety across money, orders, inventory & payment callbacks. Produces more consistent Claude CLI output.
Database	MongoDB (Atlas)	Flexible schema fits product variants and child-development fields. Managed hosting.
Auth	Better Auth	Phone-OTP primary via local BD SMS gateway; email secondary. Owns user data; avoids per-SMS USD billing & lock-in.
UI	Tailwind CSS + HeroUI	Rapid, consistent, accessible, responsive components. HeroUI Modal covers dialogs (no separate modal library).
UI utilities	react-icons + react-hot-toast	Icon set + lightweight toast notifications (react-toastify as fallback). Confirmation modals via HeroUI.
Payments	SSLCOMMERZ + COD	One aggregator = bKash, Nagad, Rocket, bank, and Visa/Mastercard (BD debit/credit).

Layer	Technology	Why
Courier	Pathao / Steadfast	Delivery consignment creation, tracking, and COD collection/remittance via API.
Hosting	Vercel + Atlas	Zero-config Next.js deployment; managed database.
Analytics	Meta Pixel + CAPI	Funnel tracking and retargeting from day one.
i18n	Bangla + English	Bilingual UI with toggle; bilingual product data.

Note on third-party APIs

SSLCOMMERZ, SMS gateway, and courier API details (fields, onboarding requirements such as trade license) change over time. Verify current official documentation at the relevant build phase rather than relying on any fixed snapshot. The architecture in this document remains stable regardless.

2.1 Brand & Design Tokens

Official Renvura palette. Use these exact values as design tokens (Tailwind theme) so the whole app is on-brand. Premium Gold stays the accent in both light and dark themes; Navy and Cream swap as background/surface.

Swatch	Name	HEX	RGB	Usage
	Authority Navy	#11253C	17, 37, 60	Primary. Brandmark, headers, body text on light, dark-mode background.
	Premium Gold	#CDAF80	205, 175, 128	Primary accent. Monogram, CTAs (as fill), highlights. Accent in both themes.
	Linen Cream	#F7F1E5	247, 241, 229	Supporting. Light-mode background, cards, section dividers, text on dark.
	Slate Gray	#A5AAB5	165, 170, 181	Neutral. Secondary text, borders, informational lines.

Theme mapping: Light — background Linen Cream, text/surfaces Authority Navy, accent Premium Gold. Dark — background Authority Navy, text Linen Cream, accent Premium Gold. Slate Gray for secondary text, borders, and informational lines in both.

Contrast rule to enforce

Premium Gold (#CDAF80) has low contrast on Linen Cream — never use gold text on cream. Gold works as a filled block (with navy text) or as text on navy. Body text should be Navy on light and Cream on dark for readability on mid-range Android screens.

3. Key Decisions & Answers

3.1 Authentication — Better Auth (not Firebase)

Phone-OTP is the primary login; email is secondary; guest checkout (phone only) is allowed. Better Auth is chosen over Firebase because Firebase Phone Auth bills per SMS in USD and locks user data into Google, whereas Better Auth lets Renvura plug in a **cheaper local BD SMS gateway** and own all user data in its own MongoDB models.

Responsibility to remember

With Better Auth, OTP security (rate-limiting, expiry, retry throttling) is Renvura's responsibility — Firebase would handle this automatically. It is straightforward but must not be skipped.

3.2 TypeScript — Yes

For a real system handling payments, inventory, and orders, type safety prevents a whole class of production bugs and gives Claude CLI a typed contract to build against. This is the deliberate exception to a general JavaScript preference.

3.3 Language Strategy — Toggle + Selective Hybrid

A site-wide **Bangla / English toggle** is the primary mechanism. However, the **expert notes** (the “why this helps your child” blurb on each product) are most powerful in Bangla, since that is the emotional language of most parents. Recommended approach:

- **UI chrome (menus, buttons, labels):** follows the toggle (bn/en).
- **Product name & description:** stored in both languages; shown per toggle.
- **Expert notes:** Bangla-first always, with optional English — this is where warmth and trust are built.

This is why the data model stores bilingual fields rather than relying on machine translation.

3.4 Dark / Light Mode

A theme toggle sits in the navbar. Both themes use the official palette: Authority Navy and Linen Cream swap as background/surface, Premium Gold remains the accent in both. Brand assets already exist in dark and light variants.

3.5 Customer Landing Sources (Traffic Strategy)

How customers reach the store — planned so tracking and creative are built for each channel:

Channel	Role	Priority
Facebook	Primary. Where BD parents live. Page content, reels, boosted posts, retargeting via Pixel.	Highest
Instagram	Secondary. Same Meta ad system; visual product & reel content. Younger/urban parents.	High
Google	Primary organic. A core acquisition target. Expert blog + technical SEO rank for parenting/learning queries; Google Business Profile for local trust. See §9.	Highest (organic)
WhatsApp / Messenger	Conversion & support. Direct questions, abandoned-cart follow-up, order help.	High
Direct / Word-of-mouth	Retention. Repeat buyers, reviews, referrals — compounding trust.	Grows over time

Recommended launch focus

Two engines run in parallel: **(1) paid** via Facebook + Instagram (Meta ads) for immediate acquisition; **(2) organic** via the expert blog + technical SEO + Google Business Profile, which compounds for free over time. WhatsApp/Messenger convert hesitant COD buyers. Repeat purchase is a first-class channel — a parent returns as the child grows.

4. Site Structure (Pages)

4.1 Public Storefront

- **/** — Home: expertise-led hero, featured products, categories, trust signals.
- **/products** — All products with filters (age, development domain, price).
- **/products/[slug]** — Product detail with expert note, safety info, reviews.
- **/category/[slug]** — Category listing.
- **/age/[range]** — Shop by age (2–5, 5–8, 8–12). Niche differentiator.
- **/development/[domain]** — Shop by skill: Fine Motor, Language & Literacy, Logic & Math, Social-Emotional (SEL), STEM. Differentiator.
- **/blog** — Content hub: articles, video, shorts; filter by topic, age, domain, author.
- **/blog/[slug]** — Article/video page with author profile, structured data, product cross-links.
- **/authors/[slug]** — Public author profile: credentials, bio, their articles (trust + E-E-A-T).
- **/cart, /checkout** — Cart & checkout; COD + online pay; prepay discount; guest allowed.
- **/order/confirm/[id], /track** — Confirmation and order tracking by phone + order ID.
- **/about** — Founder story & credentials (core trust page).
- **/contact, /faq** — Contact form + details; frequently asked questions.
- **Policy pages (footer)**: Privacy; Return/Refund/Replacement; Shipping & Delivery; Terms & Conditions; Child Safety & Material Disclaimer. See §5.9.
- **404 & error pages** — Branded not-found and server-error pages, both themes, bilingual.

4.2 Authentication

- **/login, /register** — Phone/OTP first; email optional.

4.3 Customer Account

- **/account** — Profile, addresses.
- **/account/orders** — Order history & tracking.
- **/account/rewards** — Loyalty points balance & history (see §6).
- **/account/reviews** — Reviews written, incentives earned.

4.4 Admin (Founder)

- **/admin** — Dashboard: sales, orders, low stock.
- **/admin/products** — CRUD, variants, images, bilingual + child-dev fields.
- **/admin/orders** — Status, push-to-courier, COD tracking.
- **/admin/categories, /admin/customers** — Management.
- **/admin/content** — Editorial: review/approve/publish posts, manage videos & shorts.
- **/admin/authors** — Manage contributor accounts, roles, and profiles.
- **/studio** — Author workspace: write, upload, submit for review (Author role only).
- **/admin/coupons** — Occasion campaigns (Ramadan, Eid, Pahela Baishakh). See §6.
- **/admin/reviews** — Moderate feedback & reviews.
- **/admin/settings** — Payment, courier, shipping zones, points rules.

5. Feature Modules

5.1 Checkout & Prepay Discount

- COD and online payment (SSLCOMMERZ) both offered.
- **Prepay incentive:** a 5% discount when the customer pays online instead of COD, shown at the moment of choice in checkout (“Pay now and save 5%”).
- Guest checkout by phone number; account optional.
- **1-click COD express modal:** an “Order via Cash on Delivery” button on the product page opens a quick modal (name, phone, address) for instant ordering without full checkout — a key BD conversion driver.

Keep it modest

A 5% prepay discount protects cash flow and reduces COD-refusal risk without training customers to always expect a discount or eroding margin.

5.2 Sales Funnel, Meta Pixel & Retargeting

Event tracking is designed into every key action from day one — not bolted on later.

- **Funnel stages:** Awareness (content/reels) → Interest (product view) → Consideration (add to cart) → Purchase → Retention (repeat).
- **Meta Pixel + Conversions API:** fire ViewContent, AddToCart, InitiateCheckout, Purchase; CAPI for reliable server-side events.
- **Retargeting audiences:** “viewed but didn’t buy” and cart-abandoners; prepaid buyers seed lookalike audiences.

5.3 Abandoned-Cart Capture

- Because checkout collects phone number early, incomplete carts can be followed up via WhatsApp/SMS.
- Store partial-cart + contact; trigger a gentle follow-up sequence.

5.4 WhatsApp & Messenger

- Floating WhatsApp click-to-chat and Messenger widgets on all storefront pages.
- **Chatbot: later phase.** Human replies at launch build more trust and fit the expert brand; add an FAQ bot with human handoff once volume justifies it.

5.5 Reviews, Feedback & Incentives

- On-site product reviews + general feedback form; reviews display on product pages.

Important policy correction

Do NOT reward *positive* reviews. It violates Google/Trustpilot policy and undermines trust. Instead, reward **honest** reviews (any rating): “Share your honest feedback, earn points.” Honest pages with occasional criticism convert better than suspiciously perfect ones.

- **Google Business Profile:** set up for local trust & SEO; embed/link.
- **Facebook page reviews:** BD customers trust these most — prioritise over Trustpilot.
- **Trustpilot:** optional / later. Lower priority for the BD market.

5.6 Loyalty Points (Customer Rewards)

Points accrue automatically in the customer dashboard and can be redeemed on future orders — a retention engine well-suited to a niche where parents return as children grow (ages 2–12).

Earning & redemption rules (confirmed)

- **Purchase:** 1 point per ₪100 spent. 1 point = ₪1 at redemption.
- **On-site review:** 10 points for an honest, verified-purchase review (any rating).
- **Facebook recommendation:** 10 points. Semi-automated verification — the customer submits their order number + a screenshot/link; the system checks the order number against the database (real, delivered, belongs to them, not already claimed), then the founder approves the screenshot before points are granted.
- **Optional bonuses:** first prepaid order, referrals, account milestones.
- **Redemption cap:** points can cover at most 5% of an order total — they discount, never replace payment.
- **Ledger:** every earn/redeem event recorded and visible in /account/rewards.

Why Facebook rewards are semi-automated

The order-number check is automatic and is the anti-fraud backbone — it confirms a real delivered order and blocks duplicate claims. But Facebook offers no API to prove a recommendation is genuine and belongs to the claimant, so a quick manual approval of the screenshot remains necessary. On-site reviews (tied to an order) can be fully automated; Facebook cannot.

5.7 Occasion Coupon / Discount Campaigns

An admin-managed coupon system for seasonal promotions — Ramadan, Eid, Pahela Baishakh, and others.

- **Types:** percentage, fixed amount, free/reduced delivery.
- **Rules:** start/end dates, usage limits, minimum order, per-customer limit, category/product scope.
- **Auto-activation:** schedule campaigns to switch on/off by date so festival offers run automatically.
- **Stacking policy:** define whether coupons combine with points or prepay discount (recommend: no stacking by default).

5.8 System Pages, Loading States & Contact

404 & Error Pages

- **Branded 404 (Not Found):** navy/gold, RV logo, works in both themes; friendly bilingual message; clear routes back — Home, All Products, Search.
- **500 / error page:** branded server-error page with a retry action and contact link.

Loading States (a system, not one screen)

- **Route-level loading:** Next.js loading.tsx for each major route.
- **Skeleton loaders:** product grids, product detail, blog list — perceived speed on mid-range Android.
- **Action spinners:** buttons during add-to-cart, checkout, and payment; disabled state to prevent double-submit.
- **Navigation progress bar:** top-of-page indicator on route change.

Contact Form & Details

- **Contact form:** name, phone, email, subject, message; validation, spam protection, success/error states, bilingual labels.
- **Submissions:** email the founder and save to admin for follow-up.
- **Displayed contact:** shown on the contact page and site footer.

- **Phone:** 01883-115898 (*click-to-call tel: on mobile*)
- **Email:** hello@renvura.com (*click-to-email mailto:*)
- **Social/chat:** WhatsApp + Messenger links alongside (see §5.4).

5.9 Legal & Trust Policies (Footer)

Five policy pages linked in the site footer, each with English and Bangla content. These are legal necessities and trust signals — present clearly, not buried.

- **Privacy Policy** — পাসওয়ার্ড ও ডাটা সুরক্ষার নীতি — how customer data and passwords are protected.
- **Return, Refund & Replacement Policy** — রিটার্ন ও রিফান্ড পলিসি — conditions, timeframe, and process.
- **Shipping & Delivery Policy** — ডেলিভারি চার্জ ও ডেলিভারি পলিসি — charges, zones, and delivery times.
- **Terms & Conditions** — নিয়ম ও শর্তাবলী — rules of use, ordering, and liability.
- **Child Safety & Material Disclaimer** — শিশু নিরাপত্তা ও ম্যাটেরিয়াল ডিসক্লেমার — age-appropriateness, materials, choking warnings, supervision guidance.

The Child Safety page is a positioning asset, not just fine print

Because Renvura sells to children and is founded by a child-development expert, this page does double duty: it limits liability *and* reinforces the brand promise of expert-led safety. Write it plainly and prominently — age guidance, material/non-toxic notes, choking-hazard warnings, and a reminder that adult supervision is advised. It should read as care, not as a legal shield.

Get real legal wording before launch

These pages need actual, accurate legal content — not placeholder text. Consumer-protection and data rules apply in Bangladesh. Have the wording reviewed by someone qualified before going live, especially Privacy, Terms, and the Child Safety disclaimer.

5.10 UI Feedback: Toasts, Modals & Icons

Consistent, immediate feedback for every user action — essential for trust and for reducing accidental mistakes on mobile.

Toast Notifications (*react-hot-toast*)

- **Success toasts:** added to cart, order placed, review submitted, address saved, coupon applied.
- **Error toasts:** failed payment, out of stock, invalid coupon, network error, OTP failure.
- **Info/loading toasts:** “Processing payment...”, “Sending OTP...” with resolve on completion.
- **Bilingual:** toast messages respect the bn/en toggle. One library only (*react-toastify* as fallback).

Confirmation Modals (*HeroUI Modal* — **no extra dependency**)

- **Cancel order:** “Are you sure you want to cancel this order?” with confirm/dismiss.
- **Remove product from cart:** confirm before removing an item.
- **Delete address / review:** confirm destructive actions.
- **Redeem points / apply coupon:** confirm before applying, where irreversible.
- **Admin destructive actions:** delete product, unpublish content, cancel/refund — always confirmed.
- **Quick-view (optional):** product quick-view modal from listing pages.

Icons (*react-icons*)

- Consistent icon set across cart, wishlist, search, filters, ratings, social, and admin — tree-shakeable, one dependency.

5.11 Affiliate / Referral Program (Growth — later phase)

Renvura runs its **own affiliate program** so partners (parenting influencers, teachers, bloggers) earn commission for driving sales. This is a growth lever, not launch-critical — it is built after the core store is stable.

- **Affiliate accounts:** partners register and receive a unique referral link/code.
- **Tracking:** attribute orders to the referrer via cookie + code at checkout.
- **Commission ledger:** record earnings per affiliate; define rate (e.g. % of order value) and payout threshold.
- **Dashboard:** affiliates see clicks, conversions, and earnings; admin approves payouts.
- **Fraud checks:** guard against self-referral and fake orders (especially with COD).

Why this is a later phase

An affiliate system adds real complexity — referral attribution, commission accounting, payouts, and fraud prevention. Building it at launch would delay going live. Ship the store first; add affiliates once you have products selling and traffic to reward.

5.12 Merchandising & Retention

Four expertise-led tactics that raise order value and turn one-time buyers into multi-year customers as their child grows — the compounding advantage of this niche.

Curated ECD Bundles / Development Kits

- **Pre-curated boxes:** e.g. “3-Year-Old Sensory Development Kit” — multiple products grouped into a themed developmental kit.
- **Why it works:** higher order value, gift-friendly, and only a qualified ECD expert can credibly curate one — a differentiator competitors can’t copy.
- **Built via:** the `productType = bundle` field (see Data Model).

Lead Magnet (top-of-funnel capture)

- **Free downloadable guide:** e.g. “The 2–6 Year Milestone & Screen-Free Play Guide” in exchange for a phone number/email.
- **Purpose:** captures leads for retargeting and the funnel; showcases expertise before any sale.

Unboxing Experience (printed Play Guide)

- **In every package:** a printed parent guide — “how to use this toy to develop speech and problem-solving.”
- **Effect:** cheap, high-trust, reinforces the expert brand, and drives reviews.

Age-Graduation Sequences (retention automation)

- **Automated follow-up:** when a parent buys a 3-year-old kit, a WhatsApp/message reminder 6–12 months later — “your child is turning 4; here are the next milestones and the tools that support them.”
- **Why it matters:** operationalizes repeat-purchase-as-children-grow — turning one sale into a 5–10 year customer relationship.

Sequencing note

Bundles, the lead magnet, and the printed unboxing guide can ship at or near launch — they are low-tech and high-impact. Age-graduation automation depends on messaging integration and is best added alongside the funnel/retention phase, not on day one.

6. Content Platform (Multi-Author Expert Blog)

The blog is the **organic-growth and trust engine** of Renvura. ECD and education specialists publish expert content that ranks in Google search, builds authority, and links directly to relevant products — turning teaching into commerce.

6.1 Author Roles & Editorial Workflow

A new role sits between customer and admin, so specialists can contribute without access to orders, products, or settings.

- **Author / Contributor role:** can write, upload, and submit content; cannot access commerce or settings.
- **Public author profile:** name, photo, credentials, bio — shown on every article. This is the visible proof of expertise.
- **Editorial workflow:** Draft → Submitted → Founder review → Published. Nothing goes live without approval.

Why author credentials matter for Google

Google heavily rewards **E-E-A-T** (Experience, Expertise, Authoritativeness, Trust) for child, health, and parenting content. Real specialist credentials shown on-page are a genuine ranking advantage competitors cannot fake.

6.2 Content Types

- **Articles (MDX/rich text):** the SEO backbone — text is what Google indexes best. Article-first strategy.
- **Video:** embedded YouTube/Facebook. Host on YouTube too — the #2 search engine — to pull traffic back.
- **Shorts / Reels:** embedded short-form; repurposed for the social funnel.
- **Tagging:** every piece tagged by age range + development domain, and cross-linked to relevant products.

Set expectations honestly

Video and shorts are strong for social reach but weak for Google text-search on their own. Articles are what rank and pull search traffic. Strategy: article-first for SEO, with video/shorts embedded to enrich articles and feed social — do not over-invest in shorts expecting Google traffic they won't produce.

6.3 Content-to-Commerce Loop

- Each article links to the exact products that apply (e.g. a fine-motor article → lacing toys).
- Product pages link back to relevant articles — building internal links Google rewards and keeping readers on-site.
- This loop is the core innovation: expertise attracts, content educates, products convert.

7. SEO & Google Search Strategy

Google organic search is a **primary acquisition channel**, not an afterthought. Most of the following is enabled by choices already made (Next.js server rendering) but must be built in from Phase 1, because retrofitting SEO is costly.

7.1 Technical SEO (build-in requirements)

- **Server rendering (SSR/SSG):** product, category, and blog pages must render full HTML for Google — never client-only shells.

- **Per-page metadata:** unique title, meta description, and Open Graph/Twitter tags on every product, category, and article (also controls Facebook share previews).
- **Structured data (schema.org):** Product + AggregateRating (price & stars in results), Article, Organization, LocalBusiness. High-leverage; most BD stores skip it.
- **Sitemap & robots:** auto-generated sitemap.xml + robots.txt so every product and article is discoverable.
- **Bilingual SEO (hreflang):** tell Google which language version to serve which searcher, so bn/en rank independently instead of competing.
- **Clean, readable URLs:** /blog/child-motor-skills-3-years, not /post?id=482.
- **Core Web Vitals:** speed & image optimization — a ranking factor, and critical on mid-range Android.
- **Canonical tags:** avoid duplicate-content penalties across filters and variants.

7.2 Content SEO

- Expert articles targeting real parent search queries (Bangla + English).
- Author E-E-A-T signals on every post (see §6.1).
- Internal linking via the content-to-commerce loop (see §6.3).
- Google Business Profile connected for local search & map presence.

7.3 Measurement

- Google Search Console (indexing, queries, issues) and Google Analytics / GA4 from launch.
- Track which articles drive search traffic and which convert to sales — double down on winners.

Note on third-party specifics

Google's ranking signals and structured-data requirements evolve. Verify current Google Search Central guidance at build time. The technical foundations above (SSR, metadata, schema, sitemap, hreflang, performance) remain stable best practice.

8. Data Model (Bilingual & Child-Development Aware)

Collections store bilingual fields (bn/en) where customer-facing, and Renvura-specific child-development fields that competitors lack.

Product

- name {bn, en}, slug, description {bn, en}
- price, comparePrice, sku, stock, images[], category, brand, variants[]
- **ageRange {min, max}** — powers /age/[range]
- **developmentDomains[]** — Fine Motor, Language & Literacy, Logic & Math, SEL, STEM → /development
- **expertNote {bn, en}** — “why this helps”; Bangla-first
- **milestones[] {bn, en}** — developmental milestones this item supports (shown as a checklist on the product page)
- **productType** — single | bundle; bundles group multiple products into a curated development kit
- **bundleItems[]** — for bundles: the products included
- **safetyInfo** — material, non-toxic/lead-free, choking warning
- isActive, isFeatured, ratingSummary, createdAt

Order

- orderNumber, customer {name, phone, email?}
- items[{product, qty, price}], shippingAddress {division, district, area, street}
- paymentMethod: cod | bkaash | nagad | rocket | card | bank
- paymentStatus, subtotal, deliveryCharge, discount, pointsUsed, total
- status: pending → confirmed → processing → shipped → delivered / cancelled / returned
- courier {provider, consignmentId, trackingCode}, codAmount, notes, createdAt

User

- role: customer | author | admin, phone (primary), email?, addresses[]
- pointsBalance, pointsLedger[{type, amount, orderRef?, date}]
- **authorProfile?** { displayName, photo, credentials, bio {bn,en}, isActive } — present for author role

Post / Content

- title {bn,en}, slug, type: article | video | short
- body {bn,en} (MDX for articles), coverImage, videoUrl? (for video/short)
- author (ref User), status: draft | submitted | published, publishedAt
- **ageRange {min,max}, developmentDomains[], linkedProducts[]** — tagging + commerce loop
- **seo { metaTitle {bn,en}, metaDescription {bn,en}, ogImage }** — per-page SEO

Category / Coupon / Review

- Category: name {bn,en}, slug, parent?, image, seo{...}
- Coupon: code, type, value, startsAt, endsAt, usageLimit, minOrder, scope, perUserLimit
- Review: product, user, rating, text {bn?/en?}, isVerifiedPurchase, status, pointsAwarded

9. Build Phases (for Claude CLI)

Sequenced so each phase produces a working, reviewable increment. COD flow is proven before payments; SEO foundations are laid early; content and growth features layer on a stable core.

9.1 Launch Scope vs Later (stay lean & premium)

Premium is built by **restraint**, not by shipping every feature at once. This document is the complete menu of decisions — not a day-one checklist. Launch with the lean core below; add the rest only once the core is proven with real customers. A faster, focused store beats a feature-heavy one, especially on mid-range Android where every extra script costs load time and Google ranking.

✓ Launch (v1) — lean core

- Catalog: age + skill filters, expert notes, milestone checklist
- Product & product-detail pages
- Cart + checkout; COD + 1-click COD express modal
- Prepay discount (online payment via SSLCommerz)
- Courier integration (Pathao / Steadfast)
- Core blog/content (single-author: you)
- Bundles, lead magnet, printed unboxing guide
- Essential pages: about, contact, policies, 404/error

→ Later — once proven

- Loyalty points + coupon campaigns
- Review incentive system (reviews can launch; the points reward waits)
- Affiliate / referral program
- Age-graduation retention automation
- Chatbot (FAQ + human handoff)
- Multi-author content platform at scale

- SEO foundations, bilingual (bn/en), dark/light, toasts/modals

The rule that keeps Renvura premium

If a feature does not clearly earn its place at launch — by driving trust, conversion, or first revenue — it waits. Nothing in the “later” column is cut; it is sequenced. Build ~60% of this document for v1. That is the plan working, not scope lost.

Full phase sequence (each still gated by your review before the next begins):

#	Phase	Scope
1	Foundation + SEO base	Next.js + TS + Tailwind/HeroUI, react-icons, react-hot-toast, Atlas, i18n (bn/en), theme toggle, layout; 404/error pages, loading-state system, contact page; SSR strategy, metadata, sitemap/robots, hreflang scaffold.
2	Catalog	Product/Category models (bilingual + age/domain/expert-note/safety/milestones), single + bundle products, listing, detail, filters, Product schema.org markup.
3	Cart & Checkout (COD)	Full order flow end-to-end with COD; 1-click COD express modal on product pages, before any payment integration.
4	Auth	Better Auth phone-OTP + local SMS gateway, guest checkout, email secondary, customer accounts.
5	Payments	SSLCOMMERZ (bKash/Nagad/Rocket/cards/bank) + prepay discount + callbacks.
6	Courier	Pathao/Steadfast: consignment, tracking, COD reconciliation.
7	Admin	Product/order management, push-to-courier, dashboard, coupons, points rules.
8	Funnel & Tracking	Meta Pixel + CAPI, abandoned-cart capture, age-graduation sequences, lead-magnet capture, WhatsApp/Messenger widgets, GA4 + Search Console.
9	Content Platform	Multi-author blog: Author role, /studio, editorial workflow, article/video/short types, author profiles.
10	Content SEO	Article/Organization schema, per-post metadata, content-to-commerce cross-linking, canonical tags.
11	Reviews & Social Proof	On-site reviews, honest-review incentive, points, Google Business Profile, Facebook reviews.
12	Loyalty & Coupons	Points ledger, redemption, occasion coupon campaigns with auto-activation.
13	Affiliate Program	Referral links/codes, order attribution, commission ledger, affiliate dashboard, payout approval, fraud checks.
14	Chatbot (optional)	FAQ bot with human handoff — only after volume justifies it.
15	Polish & Launch	Core Web Vitals, Bangla QA, performance, FB catalog/pixel, SEO audit, security review.

How to use this with Claude CLI

Work one phase at a time. For each phase: (1) confirm scope from this document, (2) let the CLI plan the phase, (3) review the plan, (4) generate, (5) test, (6) sign off before the next phase. Keep this document as the single source of truth.

10. Remaining Decisions Before Build

Item	Options	Recommendation
Backend shape	Monolith (all in Next.js) vs separate Express backend	Monolith — faster solo launch; Express skills still apply.
SMS gateway	bulksmsbd / Alpha SMS / Reve SMS / others	Pick by Phase 4 — compare price per SMS & Bangla sender ID.
Payment aggregator	SSLCOMMERZ / aamarPay / ShurjoPay	SSLCOMMERZ — most established; switch if onboarding is slow.
Courier(s)	Pathao / Steadfast / RedX / Paperfly	Start with 1–2 — based on coverage & COD terms.

— End of Specification —

Review this document, mark any changes, and finalize before Phase 1.
